WILL YOUR COMPANY SNEEZE WHEN THE CORONAVIRUS STRIKES?

Ask Yourself These Questions:

1 **BANDWIDTH**
Do you have sufficient bandwidth to handle the higher volume traffic for remote workers?

2 **COMMUNICATIONS**
Do you have a cloud-based unified communications system to facilitate more remote work?

3 **SECURITY PROTOCOLS**
Do you have security protocols and systems, like MFA and VPN, to protect remote worker connections?

4 **PERSONAL DEVICES**
Could you manage and secure company data on personal mobile devices as they become more common in a remote environment?

5 **HELP DESK**
Does your IT help desk have proper procedures in place to adequately scale for an increase in remote workers?

6 **INFRASTRUCTURE**
How will your internal IT staff maintain your system infrastructure if they are required to work remotely?

7 **MINIMIZE DISRUPTION**
Could you maintain your necessary "uptime" to minimize any disruption to normal business operations?

8 **CONTINGENCY PLAN**
Does your managed services provider have a proven contingency plan to effectively service your business if they need to work remotely?

9 **INVENTORY**
Do your hardware providers have sufficient inventory and ability to ship any necessary equipment on a timely basis?

10 **AUTOMATION**
Have you automated repetitive tasks that do not really require a human?

11 **CYBER RISK**
Do you have a plan to boost your security screening anticipating scammers will play on employee anxieties and increase your cyber risk?
